Infrastructure Grand Challenges

- What are the potential benefits?
- How can we realise these?
- What is stopping us?

Innovative business models and a focus on outcomes, value and purpose can deliver improved infrastructure delivery and performance

Infrastructure interdependence, system resilience, vulnerability, adaptability, flexibility require collaborative multi-disciplinary / cross-sectoral / systemic / holistic approaches

Low Carbon, resilience and sustainability must be at the core of all infrastructure planning, delivery and operations

Governance and Regulation are important tools to enable cross-sectoral communication, collaboration and decision making to improve performance and provision infrastructure systems

A Conceptual Approach to Strategic Performance Indicators:

Making the Case For An Outcome-Oriented approaches to Infrastructure Performance Indicators and National Infrastructure Assessment

On behalf of Tom Dolan, Claire Walsh, Chris Bouch, Neil Carhart

Dr Tom Dolan, UCL

ICIF Centre Manager and Senior Research Associate

UKCRIC Senior Research Associate

Understanding infrastructure: need, value and purpose

Ralitsa Hiteva, Kat Lovell, Tom Dolan and Neil Carhart (eds)

Coming soon in 2017

Targeted at those concerned with improving the quality of the outcomes enabled by infrastructure systems, this edited volume advocates deeper consideration of the purpose, value, and needs we expect to be fulfilled by, infrastructure systems. These concepts and the dynamics between them, frame the way we think about and use the interdependent infrastructure systems on which we depend. The volume puts forward opportunities to embed *people, nature and systems thinking* at the heart of infrastructure governance.

Presentation Based on

Research into Outcome-oriented Approach to Performance Indicators by by Tom Dolan, Neil Carhart, Claire Walsh and Chris Bouch nPapers on behalf of Infrastructure UK

[http://www.icevirtuallibrary.com/doi/10.1680/jinam.16.00015 ...](http://www.icevirtuallibrary.com/doi/10.1680/jinam.16.00015...)
[http://www.icevirtuallibrary.com/doi/10.1680/jinam.16.00016 ...](http://www.icevirtuallibrary.com/doi/10.1680/jinam.16.00016...)

And subsequent research undertaken by Tom Dolan in Connection to

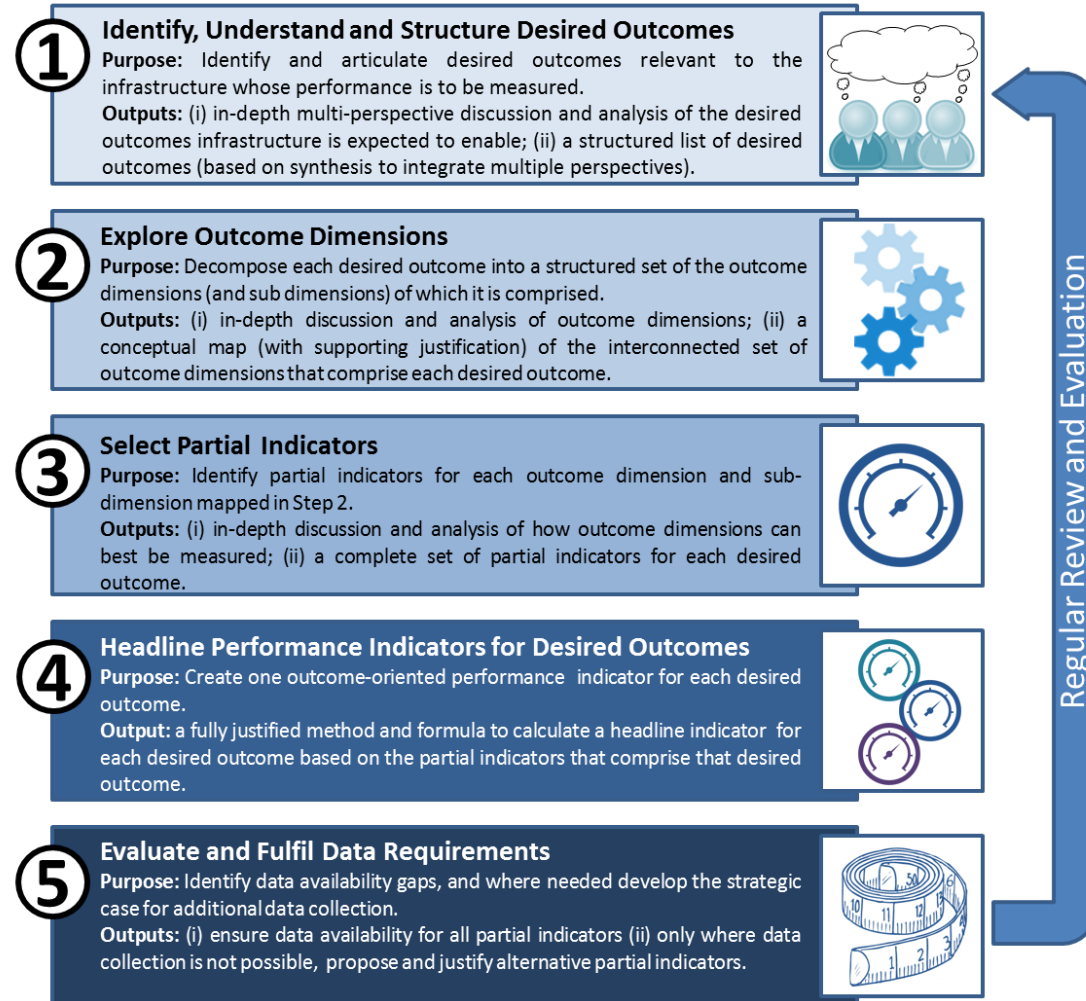

The Significance of an Outcome-oriented Approach

- In the absence of a clearly articulated, shared, collaboratively developed and mutually understood **vision** comprising the **desired outcomes** that we expect infrastructure to enable, it is not possible to perform a full evaluation of how *actual* infrastructure system performance compares to *expected* infrastructure performance or meaningfully assess infrastructure system need.
- Therefore, **Outcome-oriented PI** (slides 4 and 5) are an essential and complimentary part of an approach to PI (slide 7) to support understanding of whole system performance.

Outcome Framing

- To support objective evaluation of performance and system need, desired outcomes must be framed terms that are:
 - **Solution Neutral:** not aligned with any specific solution or mode of delivery
 - **Sector Neutral:** not framed in terms of a specific infrastructure sector
 - **Technology Neutral:** not aligned with the incumbent or any other technology.

Process for Outcome-Oriented Performance Indicators

Process presented in more detail in two papers:

A Conceptual Approach to Strategic Performance Indicators - Read in full at: <https://t.co/vgqufaRvAH> and

Applying a New Concept for Strategic Performance Indicators - Read in full at: <https://t.co/MSh8G3Icfn#infrastructure>

Identify Outcomes

1

Identify, Understand and Structure Desired Outcomes

Purpose: Identify and articulate desired outcomes relevant to the infrastructure whose performance is to be measured.

Outputs: (i) in-depth multi-perspective discussion and analysis of the desired outcomes infrastructure is expected to enable; (ii) a structured list of desired outcomes (based on synthesis to integrate multiple perspectives).

2

Explore Outcome Dimensions

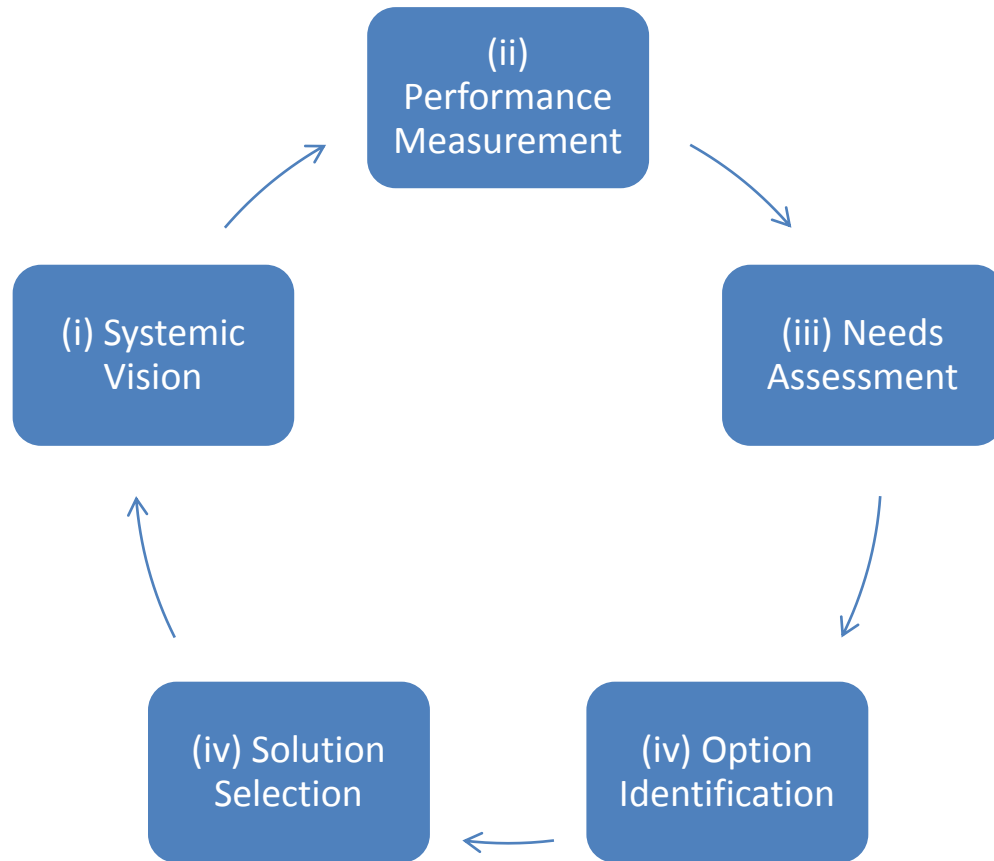

Purpose: Decompose each desired outcome into a structured set of the outcome dimensions (and sub dimensions) of which it is comprised.

Outputs: (i) in-depth discussion and analysis of outcome dimensions; (ii) a conceptual map (with supporting justification) of the interconnected set of outcome dimensions that comprise each desired outcome.

A Systemic* Toolkit for Infrastructure Decisions

*collaborative, transparent, structured and flexible

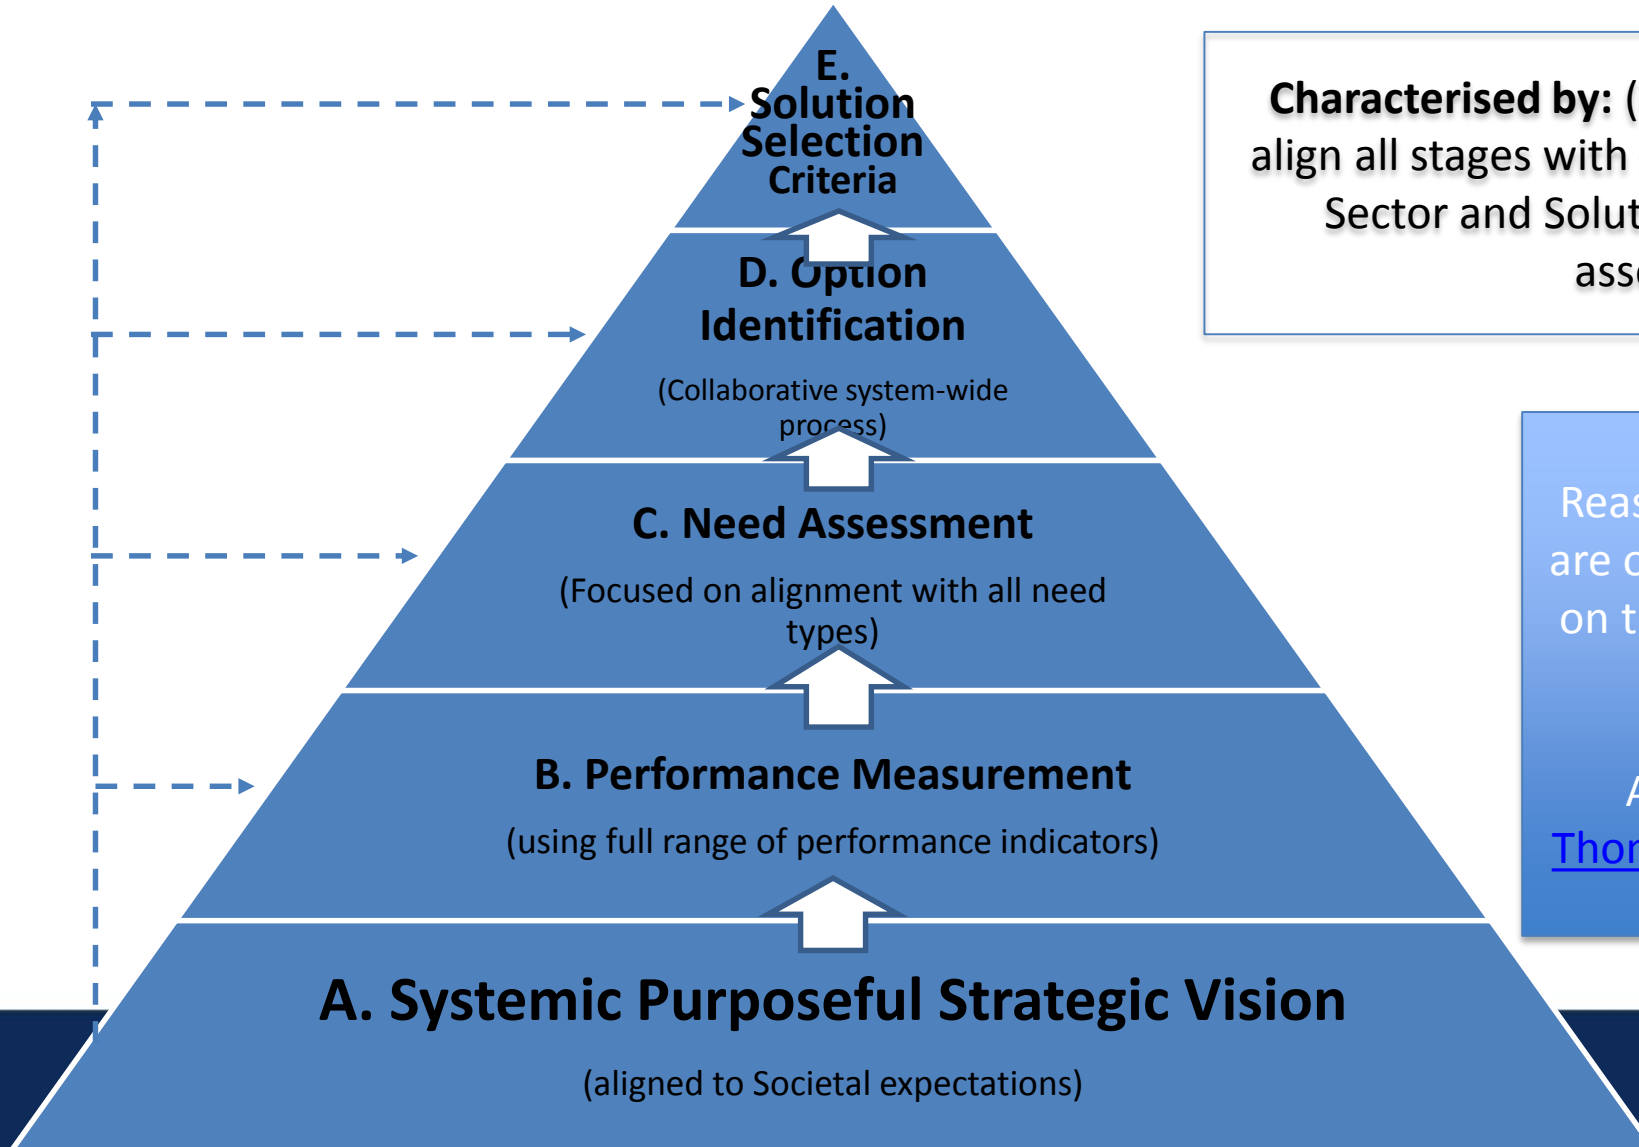

An early version of this toolkit is referred to in:

Aligning Systemic Infrastructure Decisions with Social Outcomes

. [doi: 10.1680/jcien.2016.169.4.147](https://doi.org/10.1680/jcien.2016.169.4.147)

More details are available from Dr Tom Dolan Thomas.dolan@ucl.ac.uk

Systemic Purposeful Strategic Vision and Performance indicators* as a Foundation for Infrastructure Decision Making

Characterised by: (i) an Outcome-oriented approach to align all stages with societal expectations. (ii) Technology, Sector and Solution Neutral Framing for objective assessment at all stages

Reasons why such an approach is needed are outlined in the next slide. More details on the breakdown of each layer are given in slide 9.

Additionally, contact Dr Tom Dolan
Thomas.dolan@ucl.ac.uk for more details

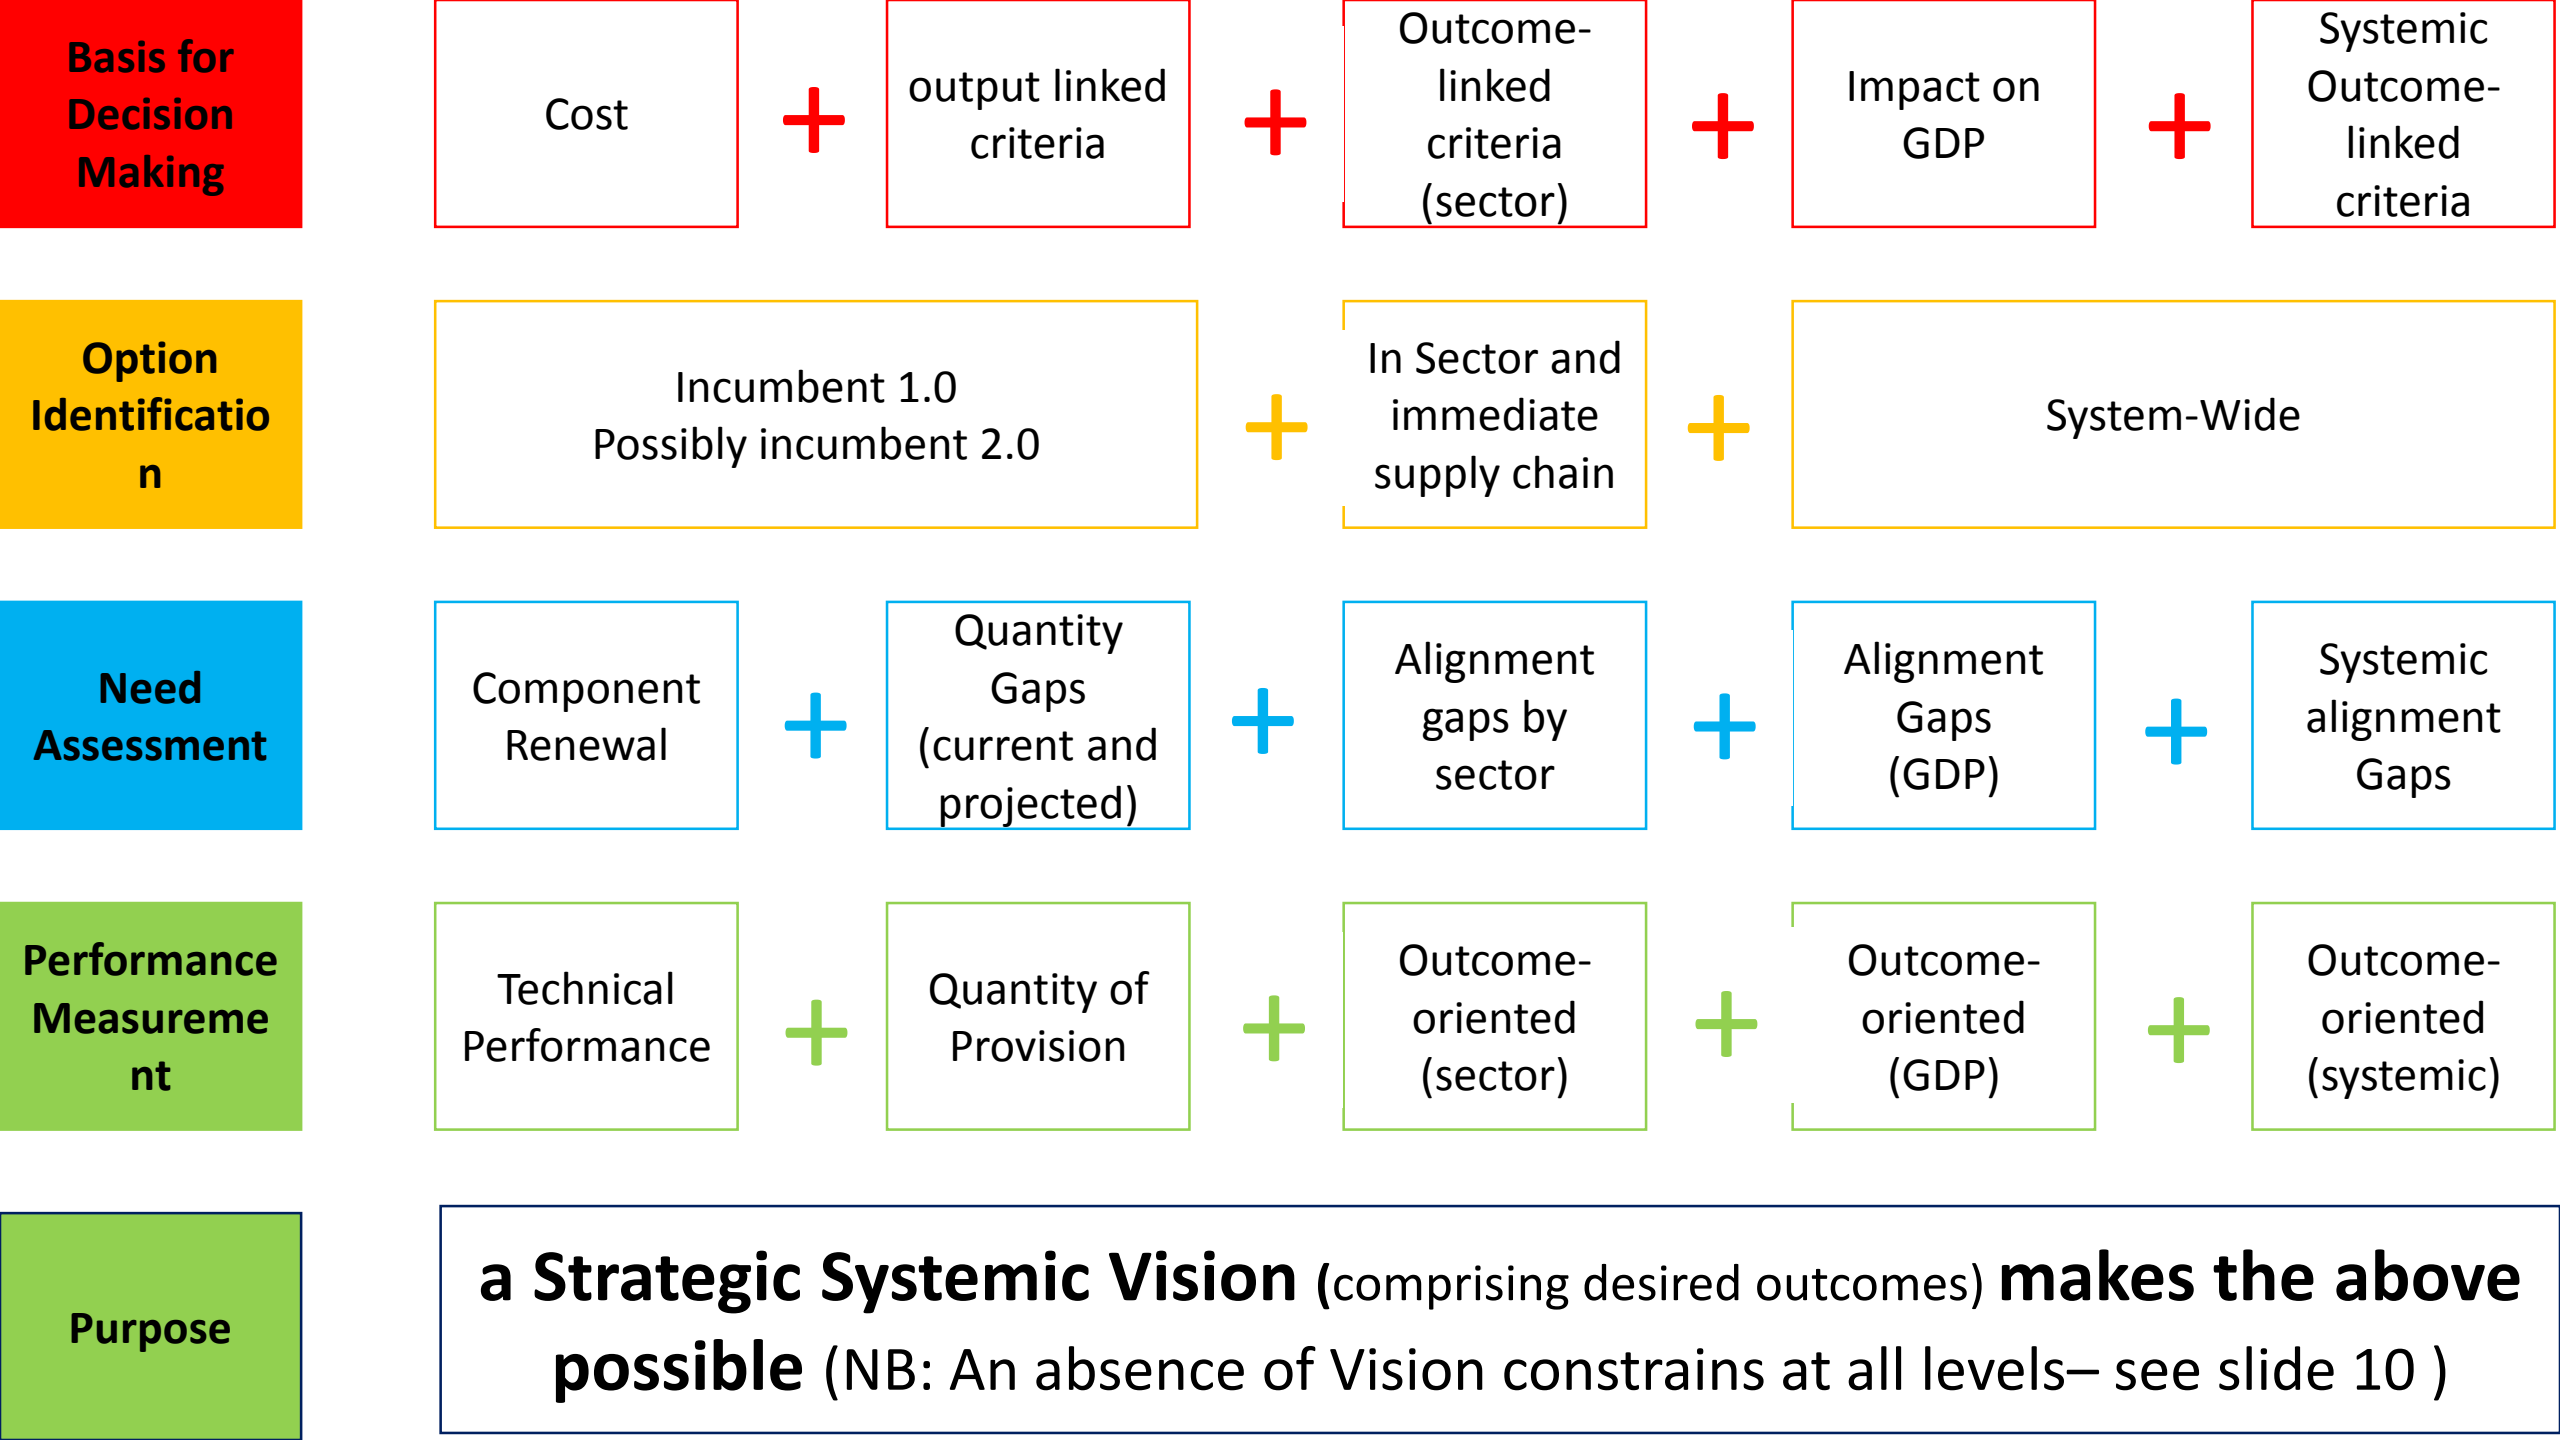

Purpose, Performance Indicators and System Need

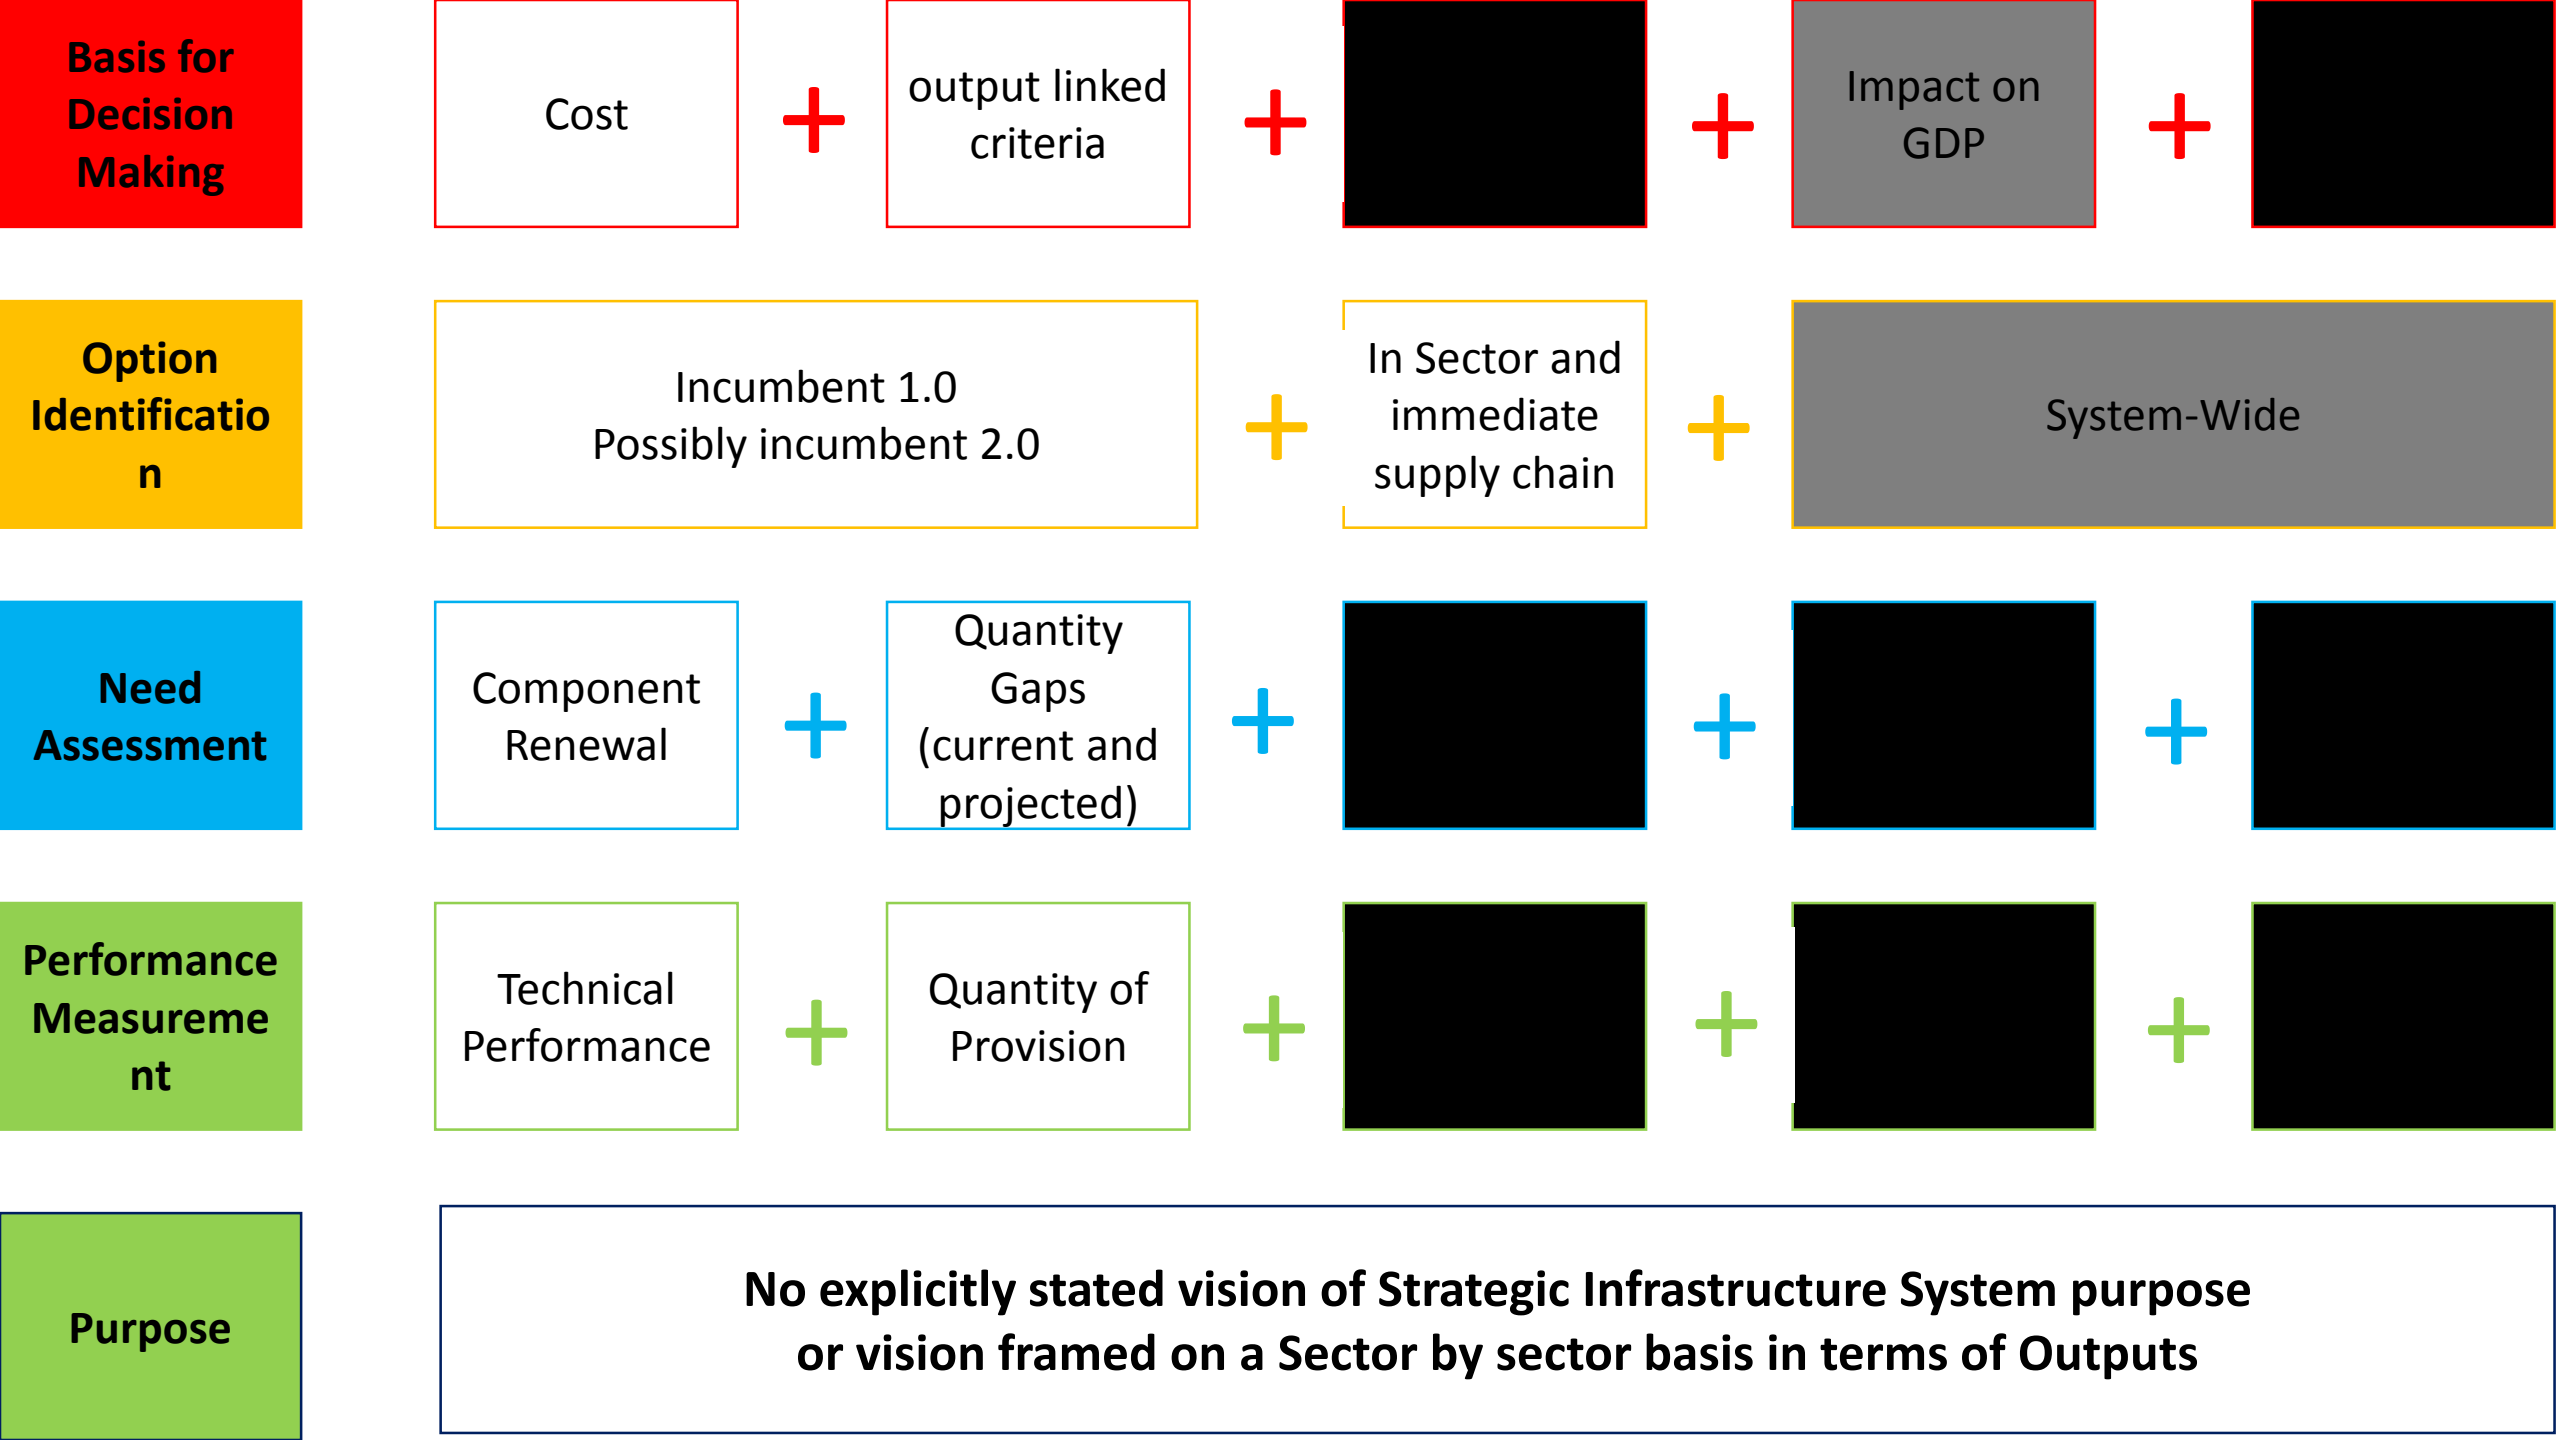

To undertake a complete **Need Assessment** - 4 types of need must be evaluated

- Renewal/Maintenance
- Quantity
- Alignment
- System Health

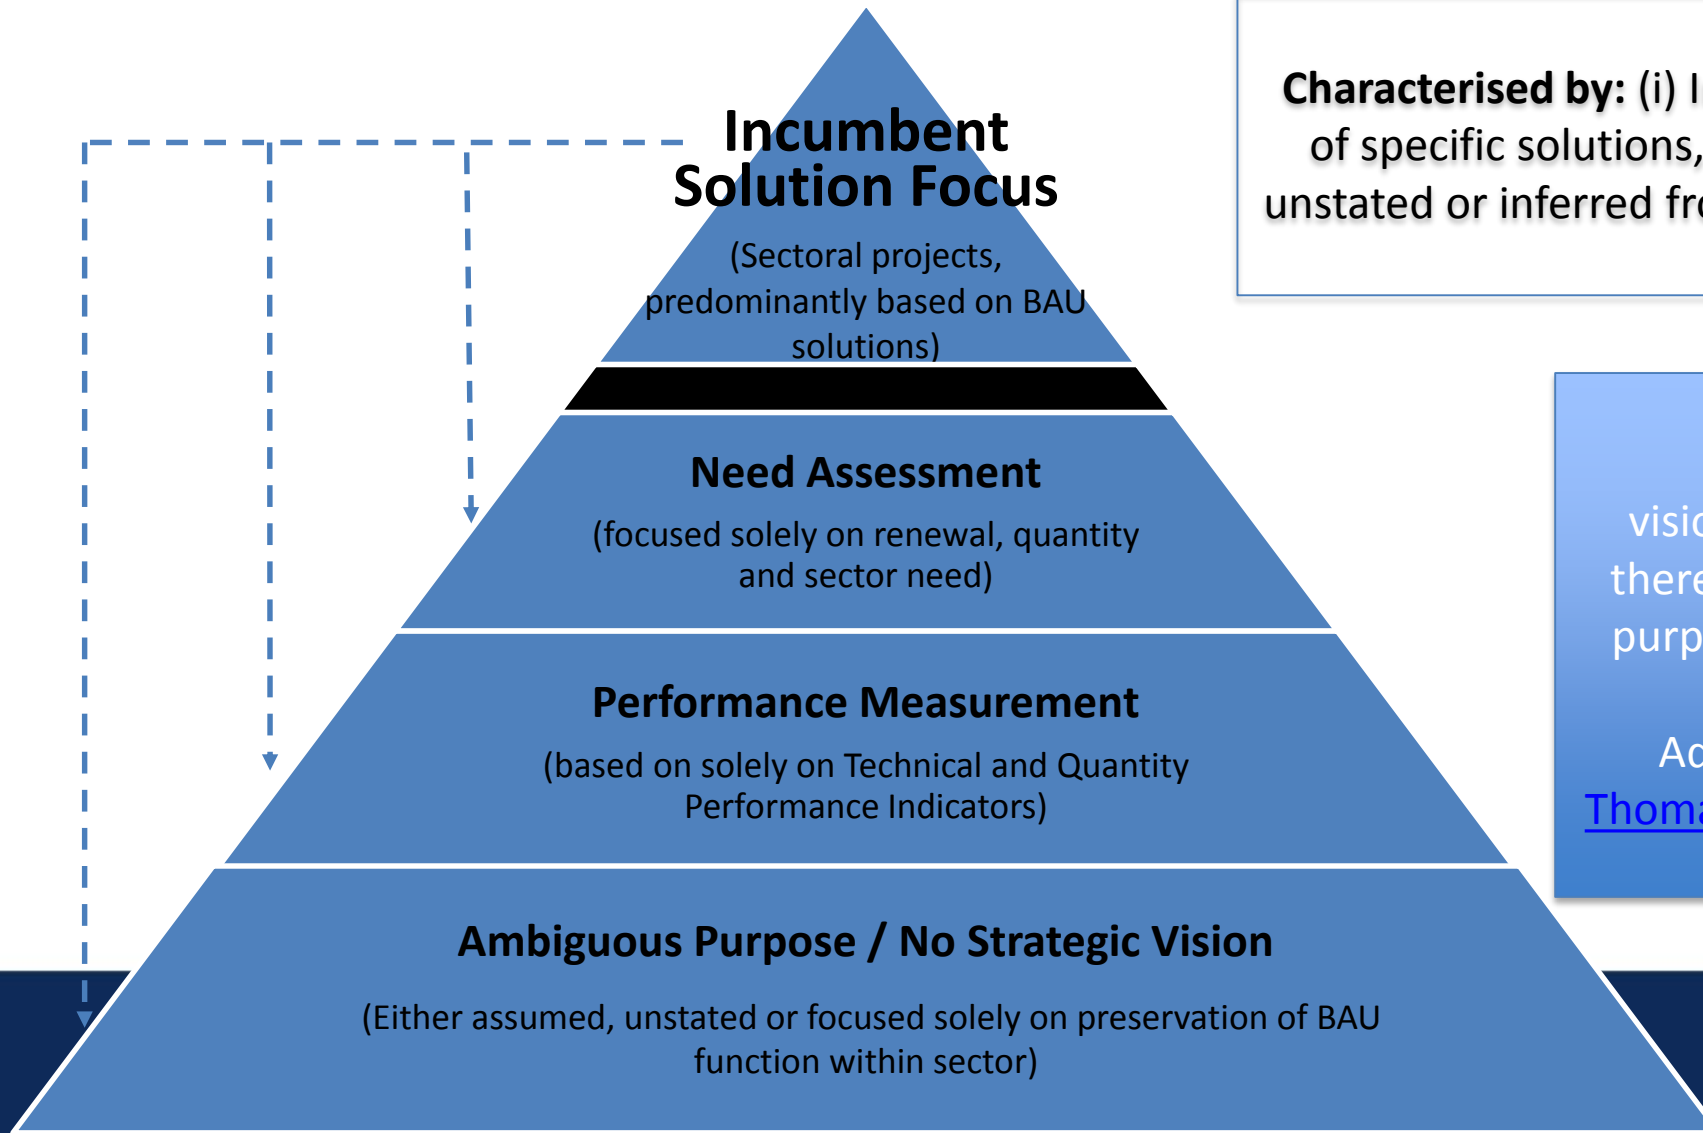

Each **Need type** requires a set of **Performance Indicators (PI)** capable of measuring it. These PI types are complimentary and it is not possible to meaningfully assess whole system performance without utilising these acknowledging the recognising the importance of all PI types:

- Technical PI
- Quantity PI
- Outcome – Oriented PI (based on slides 2, 3 and 4)
- System Health PI

Absence of systemic or outcome based vision Sector = > Risk Performance and Need Assessment Driven by: Incumbent Solution and BAU

Characterised by: (i) Infrastructure Need framed in terms of specific solutions, sectors or technology (ii) Purpose unstated or inferred from properties of incumbent solution

In the absence of clarity of vision/purpose/aspirational outcome, there can be a tendency to infer system purpose from incumbant solutions only

Additionally, contact Dr Tom Dolan
Thomas.dolan@ucl.ac.uk for more details
